INSTRUCTION MANUAL - APM Telescopes

telescope, objects can be quickly located and brought to the centre of the field. Alignment is best done outdoors in day light when it's easier to locate objects. If it is necessary to refocus your finderscope, sight on an object that is at least 500 yards (metres) away. For 5x24 and 6x24 finderscope: twist the end of the ...

INSTRUCTION MANUAL

The finderscope is a small low-powered and wide field of view telescope mounted alongside the main telescope and is used to search for the target and aim the main telescope at it. But before you can use the finderscope, you will need to line it up with the telescope. This procedure will become easier with practice. 1.

The eyepieces magnify an object based on the telescopes focal length divided by the eyepiece size. So for instance a telescope with a focal length of 1000mm with a 10mm eyepiece would give magnification of x100 (1000/10=100) while the 25mm eyepiece would give x40 (1000/25=40mm). So how big can you get ?
