Lamb Feedlot Management Guide

The NAHMS Health Management on U.S. Feedlots 2021 study is designed to provide a snapshot of current feedlot cattle health management practices. The information collected will also allow for the analysis of trends in specific topics related to cattle health, based on previous NAHMS feedlot studies.

USDA APHIS | NAHMS Feedlot Studies

A general rule of thumb for feeder space is to provide 18 to 22 inches for calves up to 600 pounds, 22 to 26 inches per head for calves 600 pounds to market weight, 26 to 30 inches per head for mature cows, and 14 to 18 inches per head for calves. If you have feed available at all times, these sizes can be decreased.

margin exists. A positive feed margin can only be realized with high mass gains and a relatively low cost of feed.

Feedlotting Cattle

This is the profit or loss made by a feedlot as a result of live mass gain in relation to cost of feed consumed. It is calculated as follows: $\text{Feed margin} = \text{Live mass gain} \times (\text{sale price/kg} - \text{cost/kg gained})$. Through good management, a feedlot can improve the margin by achieving an optimal growth rate and obtaining the best feed at the best price.

Growing out and fattening cattle in a feedlot

Sound knowledge of feedlot management, backgrounding and beef breed improvement Prior experience of working of consulting assignments with USAID or donor funded projects in Pakistan with a focus on development of the agribusiness value chain using an integrated supply chain approach, will be an

“Agriculture Improving Air Quality”

Feedlot management influences cattle performance through its affect on feed intake, weight gain and herd health. Feedlot margins are often marginal. This reinforces the value of checking the economics, securing contracts and selecting cattle which perform well and consistently meeting market specifications.
