Failure Symptoms: One sign of a failed CPS is your Tachometer will not move while cranking the engine over. This is on long extended cranking. Short cranking, on a good CPS will not register either.

What is a CPS? Failure Symptoms - Pure Diesel Power

Put a little bit of fresh engine oil around your new 7.3 cam position sensor and simply put it back into the CPS socket. This may take a little wiggling this time, so be patient and go slowly. But you'll feel the o-ring "bump" in and then it's seated. Rotate the CPS retaining bracket so it's inline with the CPS bolt hole.

When CPS issues an electronic call tag to UPS instructing them to come to your address for a pick-up, the driver puts the label on the crate and sends it to CPS. After the repairs are completed the engine is returned to you in the same crate. CPS then issues a second electronic call tag and the crate is returned to CPS empty.

A crank sensor is an electronic device used in an internal combustion engine, both petrol and diesel, to monitor the position or rotational speed of the crankshaft. This information is used by engine management systems to control the fuel injection or the ignition system timing and other engine parameters.

Crankshaft position sensor - Wikipedia

Believe it or not, the legendary 7.3 Powerstroke diesel engine is not problem free. Common 7.3 Powerstroke problems can develop over the course of its lifecycle and those hundreds of thousands of miles. Here are the most common 7.3 problems, how to spot them, and how-to articles on fixing them. Dead Head Diesel is reader-supported.

Fixing Common 7.3 Powerstroke Problems | Dead Head Diesel

P0345 is a somewhat common and difficult trouble code to diagnose. The Ford F150 is no exception to this rule. It indicates that there is an issue with the camshaft position sensor A on Bank 2. It is usually caused by a wiring problem or the CPS itself.
