The detrimental impacts of climate change coupled with increasing global energy demand has resulted in a significant research effort to develop clean technologies for energy generation, conversion, storage, distribution as well as the removal of CO 2 from various industrial sectors. Undoubtedly, electrocatalysis will play a major role in each of these aspirations, which is reflected in the ...

He theoretical foundation Is an explanation based on ideas that are related to a particular subject. It is a critical review of the theoretical elements that serve as a frame of reference in an investigation. This critical review allows us to determine the variables to be measured and the relationship between them, while determining the response to the research question.

Electrocatalysis of Hydrogen Oxidation—Theoretical Foundations
Abstract Electrocatalysis facilitates conversion between electrical and chemical energy in fuel cells and electrolysis devices. Rational design of the electrocatalytic interface, including selection of electrode and electrolyte compositions and their optimal structure, requires establishing composition–structure–function relationships.

Density functional theory models for electrocatalytic ...
Model reaction 3: HER. Next, we tested another fatigue mechanism due to particle detachment during electrocatalysis. Pt/C catalyzed HER is chosen to study this problem, because Pt/C itself is quite a robust catalyst for HER, and thus is a good model system to highlight the effect of particle detachment in performance decay.

Fluidized Electrocatalysis | CCS Chemistry
Chemists have known how to use electricity to split water into hydrogen and oxygen for more than 200 years. Nonetheless, because the electrochemical route is inefficient, most of the hydrogen made nowadays comes from natural gas. Seh et al. review recent progress in electrocatalyst development to accelerate water-splitting, the reverse reactions that underlie fuel cells, and related oxygen ...

Combining theory and experiment in electrocatalysis ...
In this chapter, we introduce the density functional theory (DFT)-based computational approaches to the study of various electrochemical reactions (hydrogen evolution reaction (HER),

oxygen evolution reaction (OER), oxygen reduction reaction (ORR)) occurring on heterogeneous catalysis surfaces. A detailed computational approach to the theoretical interpretation of electrochemical reactions and ...
