that rates of disability among the elderly grew significantly during the 1970s, but fell significantly during the 1980s.

## **Forecasting the Nursing Home Population : Medical Care**

A simple accounting model is developed for forecasting health expenditures, using the U.S. Medicare system as an example. Principal Findings. Medicare expenditures are projected to rise from 2.2 percent of GDP (gross domestic product) to about 8 percent of GDP by 2075. This increase is due in equal measure to increasing health spending per beneficiary and to population aging.

very strong positives continue to shine. The best evidence is that healthcare continues to be one of the strongest employment sectors in our economy. In the first three months of 2017, during a time when the media was full of stories about imminent change and uncertainty for the industry, healthcare still added approximately 60,000 new jobs.

## **Healthcare Industry Forecast: High Demand Due to Aging ...**

A new working paper by Robert Fogel, "Forecasting the Cost of U.S. Health Care in 2040" (NBER Working Paper 14361), examines several factors that are likely to be important in determining how fast health care costs rise in the future. The first factor is trends in age-specific prevalence rates of chronic diseases and disabilities.
