Infertility and Reproductive Medicine: (Hyperandrogenism ...

Hyperandrogenism is a fundamental symptom of polycystic ovarian syndrome (PCOS), the leading endocrine cause of female infertility. Within the infertile population, approximately three-quarters of women with anovulatory infertility have PCOS, thus accounting for approximately one-third of women with secondary amenorrhea and approximately 90% of women with oligomenorrhea [1].

Infertility And Reproductive Medicine Hyperandrogenism ...

A common cause of hyperandrogenism is Polycystic Ovary Syndrome (PCOS) where the ovaries produce excesses of male hormone and do not ovulate regularly. This condition is also a common cause of infertility. If adrenal abnormalities have been ruled out, treatment of excess hair growth is usually hormonal. In patients with PCOS, a new technique known as "ovarian drilling" is used to reduce the number of cysts in the ovary that are producing the excess hormone.

Hyperandrogenism - Causes of Female Infertility ...

It affects 9 - 18% of women in reproductive age and causes hyperandrogenism (being its most common cause) and infertility. The etiology is still poorly known. Hypotheses include hormonal imbalances, genetic imbalances, genetic abnormalities, and lifestyle and environmental factors.

Hyperandrogenism/Fertilitypedia

Women. Hyperandrogenism, especially high levels of testosterone, can cause serious adverse effects on women's bodies if left untreated. High testosterone levels have been seen to be associated with obesity, hypertension, amenorrhea (cessation of menstrual cycles), and ovulatory dysfunction, which can lead to infertility.
