Continue reading Chapter 14 in Jackson . This problem is due Wednesday, April 15, 2009. Consider a particle of charge q moving in a circular trajectory of radius a in the x - y plane: $\mathbf{r}(t) = a(\cos(\omega t)\mathbf{x} + \sin(\omega t)\mathbf{y})$. Radiation from this moving particle is observed at a point $\mathbf{r} = r(\sin\theta\cos\phi\mathbf{x} + \sin\theta\sin\phi\mathbf{y} + \cos\theta\mathbf{z})$.

Textbooks. The textbook for the course is the world-famous, excellent, but sometimes hard-for-students-to-read book by J. D. Jackson: Classical Electrodynamics, Third Edition, by John David Jackson, John Wiley and Sons, (1998). This is the book with the blue hardcover, where he changed to SI (System-International or meter-kilogram-second-ampere) units for the first 10 chapters.

Electrodynamics-II, KSU Physics 931

Classical Electrodynamics is a textbook about that subject written by theoretical particle and nuclear physicist John David Jackson. The book originated as lecture notes that Jackson prepared for teaching graduate-level electromagnetism first at McGill University and then at the University of Illinois at Urbana-Champaign. Intended for graduate students, and often known as Jackson for short, it ...

Finish reading Chapter 11 and start Chapter 14 in Jackson . Note: The original problem was not totally well-defined. In order to define the problem, assume all measurements are taken at $t' = 0$. In the following, assume that there is a particle at the origin in the "prime" frame ($x'; y'; z'$) and that we want to determine the fields (electric and magnetic) at the point $\mathbf{r}' = a\mathbf{x}'$...

Jackson's book is not an undergraduate text, but it is beautifully written and provides an exceptionally lucid treatment of classical electrodynamics. An alternative textbook undergraduates are more familiar with is D.J. Griffiths, Introduction to Electrodynamics, 3rd edition, Prentice Hall, NJ, 1999.
