Sediment, and the Rocks formed from it are called chemical sedimentary rocks.

The third category is organic sedimentary rocks, which form from the carbon-rich remains of organisms. The primary example is coal. This black combustible rock consists of organic carbon from the remains of plants that died and accumulated on the floor of a swamp.

### **Sedimentary petrology tucker pdf > [dobraemerytura.org](http://dobraemerytura.org)**

This a a great introductory text on the subject of clastic petrology. Tucker gives a very good overview of sandstone petrology and diagenesis as well as a nice amount of information on clay and siltstones. This textbook makes a great supplement to more in-depth scholarly articles on the subjects contained within its pages.
